

ECO-FRIENDLY PACKAGING MATERIALS

ECO-FRIENDLY PACKAGING MATERIALS

Be mindful of the packaging you buy goods in. Deciding in favour of sustainable options like biodegradable, reusable, or recyclable packaging helps reduce pollution and supports a healthier planet.

- Use **biodegradable or compostable packaging** made entirely from natural, eco-friendly materials that can decompose naturally without harming the environment.
- Opt for **reusable packaging** designed for multiple uses, such as reusable lunch boxes, glass jars, or containers made from sustainable materials like bamboo or stainless steel.
- Choose **recycled or recyclable packaging**, which supports a circular economy by keeping materials in use for as long as possible.

ECO-FRIENDLY PACKAGING MATERIALS

When choosing packaging materials, go for **paper-based packaging** for its biodegradability and recyclability, **bioplastic packaging** for its plant-based composition and ability to break down naturally, and **recyclable plastic packaging** for its potential to be processed and reused multiple times.

ECO-FRIENDLY PACKAGING MATERIALS

Choose companies committed to sustainable packaging and practices. Brands that prioritize eco-friendly packaging, like using plant-based inks, and sustainable raw materials, are contributing positively to environmental preservation.
